SimPL Freight Solutions Report Reveals LTL Market Resilience

RALEIGH, NC, December 8, 2025 – SimPL Freight Solutions has released its Q3 2025 LTL Claims Report, offering critical insights into a market navigating economic uncertainty. The report highlights the less-than-truckload (LTL) industry’s notable resilience during the summer months, alongside continued stability in freight claims ratios.

Despite a temporary disruption in data availability from the September U.S. government shutdown, SimPL provided crucial analytics for July and August. The BLS LTL Producer Price Index (PPI) demonstrated an upward trend, rising to 454.01 in August, reflecting the industry’s adaptability. SimPL’s analysis also revealed a weighted average claims ratio holding steady at 0.35%, a significant reduction from previous years.

To help businesses navigate market shifts, SimPL continues to enhance its innovative tools. The LTL Freight Index Tool provides unparalleled visibility into market trends by integrating real-time data and historical insights. The company also announced that its SimPL LTL Claims Index will now be updated quarterly and made available to the public.

SimPL is committed to improving transparency within the LTL freight sector. By publishing consistent, data-driven insights into claims activity, the company provides shippers with access to metrics that have historically been difficult to obtain or compare across carriers. This initiative aims to foster more productive discussions around claims reduction and empower businesses to make more informed decisions.
